MEMORANDUM

To: Bergmann Associates
From: Dan Stevens, Camoin Associates
Date: 11/11/2016
Re: Medical Office Building Market Feasibility Analysis

Introduction

Market Analysis: The results of the general market assessment showed that Medical Office Buildings (MOBs) were in relatively tight supply in the market, especially as compared to the general office market. To examine whether MOBs are, in fact, a true opportunity for the BOA or the City of Rome, Camoin conducted a more in-depth analysis of the MOB market. Specifically, we researched and mapped out the location of other significant medical facilities in the area, determining if and where clusters exist, and to determine if the City is currently underserved and could potentially absorb a new clinic or other care facility, involving office components.

The analysis consisted of the following components:

- Medical Office Market Trends
- Inventory of Downtown Medical Use Properties
- Inventory of Major Regional Medical Facilities
- Health Care Industry Projections
- Medically Underserved and Health Care Professional Shortage Area Analysis

Key Findings

- **Current Medical Providers Not Meeting Existing Demand.** Rome is designated as a Health Professional Shortage Area (HPSA) meaning the existing providers are not fully meeting the needs of the existing population. A large portion of downtown Rome is also identified as a Medically Underserved Area. The need for providers means that there is a need for future medical office space, especially in underserved neighborhoods including downtown residential areas.

- **Greater Demand for Health Services in Future.** An aging population in the city and region is anticipated to drive an increase in demand for health services in the future. The local health industry is expected to expand as a result with new jobs in the healthcare sector. New jobs in the industry will drive demand for new medical space.

  Additionally, Rome has the potential to grow its population base by capturing new workers at the Marcy Nanocenter Project. To the extent that Rome is able to grow its population and attract new residents, it will generate new demand for health services such as primary care physicians. This in turn will generate demand for new medical office space.

- **Existing Space is Insufficient.** The medical office inventory analysis found that many of the medical office buildings in Rome are relatively old including several in converted single-family homes. This suggests that there may be
a lack of quality medical office space available to healthcare providers, which means there is current unmet demand. It also suggests that there may be future demand as these spaces become more obsolete with age.

As noted above, new residents, especially those with higher-incomes, may be attracted to living in downtown Rome in the future. These residents will likely prefer health care providers that have modern high quality facilities.

- **Competitive Pressures Exist.**
  Rome has a relatively modern multi-tenant medical office space adjacent to Griffiss Air Force Base, Mohawk Glen Center for Community Health, that is capable of serving a variety of medical needs. However, there are indications that the facility has little or no vacancy available to absorb additional need in the future. Additionally, the facility is not embedded in a residential area where needs are the highest, especially among low-income population groups that cannot easily access the Mohawk facility.

  There is also a major health care facility consolidation project underway in the City of Rome that will feature the construction of a major new regional hospital. The new facility and the immediate surrounding area is therefore well poised to absorb the needs of larger healthcare providers and those serving a regional population. However, as previously mentioned, there is still need for neighborhood and locally-serving providers.

- **Potential for New Medical Office Building in Downtown Rome.**
  Based on this analysis, there is potential for a new smaller-scale (15,000 to 25,000 square feet) medical office building in downtown Rome. The greatest need and potential is for a multi-tenant building to accommodate a range of existing and future small health care providers including physicians, mental health professionals, dentists, and other specialists. The building would need to be built to modern medical office standards.

- **New Clinic Will Alleviate Some Need.**
  During the course of this analysis it was discovered that plans exist for a new medical clinic in downtown Rome on West Dominick Street. The clinic will provide regular primary care and behavioral services. The size and full details of the project are still unknown. The address is expected to be 205 W. Dominick Street, as indicated in online job postings. The size and service offerings of the new facility will determine how much of the identified need in downtown Rome will be met.
Medical Office Market Trends

This section looks specifically at medical office space as a subcategory of the overall office market. The following geographies were analyzed: Greater Rome and Oneida County. The area of these geographies are shown in the following two maps.

Greater Rome

Oneida County
In the Greater Rome Market there are 19 medical office buildings representing nearly 250,000 square feet, according to CoStar data. Current vacancy is only 3.8% or 9,500 square feet. Despite the relatively low vacancy rate, there has been no new medical office space built in the market in the past ten years.

Looking at the county level reveals a similar pattern with the medical office inventory remaining relatively flat. Currently, the county has about 45,000 square feet of vacant medical office space on the market representing a vacancy rate of 4.4%. The vacancy rate saw a significant decrease in 2015 after being in the double digits from 2012 through 2014.

Source: CoStar

The tables below show trends in net absorption of medical office space and vacancy rate. Net absorption is a measure of how the change in actual space occupation taking into consideration changes in inventory and “move-ins” and “move-outs”. In the Greater Rome Market, net absorption of medical office space has been trending negative although absorption levels have been positive two of the last three years. From 2009 to 2016 YTD, there has been a positive net absorption of nearly 17,000 square feet of medical office space. The vacancy rate has been very strong since 2013, staying around 4% each year.
In the County overall, medical office absorption has been positive from 2014 to 2016 YTD after a period of negative net absorption from 2011 through 2013. The vacancy rate has fallen substantially from 2013, when it was 8.2%, to 6% presently.
Medical Facilities Inventory

Downtown Health and Medical Facilities

Downtown Rome has numerous existing medical and health-related properties including Rome Memorial Hospital. There are generally two cluster areas of medical office properties: surrounding Rome Memorial Hospital and the North George Street area.
The downtown area is home to Rome Memorial Hospital, a general medical and surgical hospital with 203 beds and a total of approximately 200,000 square feet. According to the most recent data available from U.S. News, the hospital had 27,000 patient visits to the emergency room, 5,170 admissions, 826 inpatient surgeries, and 5,350 outpatient surgeries. In addition to the hospital, there are two senior housing facilities and a nursing home in the downtown area.

There is a cluster of medical office properties in the downtown area, due largely to the presence of the hospital. These include 17 medical office buildings in the downtown area with sizes (rentable building areas) ranging from 2,800 square feet to 40,700 square feet. Downtown medical office space (excluding the hospital) totals 205,000 square feet. The median medical office building is 8,400 square feet. The average medical office building is 53 years old and only three were constructed after 1990 (note that the year built does not include renovation dates). A total of 10 buildings are lower quality Class C space, representing over 85,000 square feet of medical office space.

Another 7 buildings are Class B (129,000 square feet). There are no Class A medical office properties in the downtown area. The types of practices and specialties represented in the above properties is wide ranging.

The following table provides a list of all of the health and medical facilities in the downtown area.

Major Regional Medical Facilities

Map | Major Regional Medical Facilities
Mohawk Valley Psychiatric Center

Mohawk Valley Psychiatric Center (State of New York) provides quality, individualized psychiatric treatment and rehabilitation services that promote recovery. There are a total of 614 beds. Services include: Adult inpatient, outpatient clinic, residential, crisis and case management services (Assertive Community Treatment, Intensive Case Management & Supportive Case Management), Children & Adolescent inpatient, outpatient day treatment, crisis and case management services (Intensive Case Management).

Amtrak and Adirondack Trailways/Greyhound Buses serve the Utica area. The train/bus station is only 1.5 miles from the Mohawk Valley Psychiatric Center campus. The facility has 28 buildings ranging from one story up to six stories, and are located on a 121-acre parcel, according to CoStar data.

St. Elizabeth’s Medical Center

St. Elizabeth’s Medical Center, along with Faxton St. Luke’s Healthcare, are part of the Mohawk Valley Health System. The St. Elizabeth Medical Center has two campuses with 201 acute care beds. It also includes the Sister Rose Vincent Elizabeth Family Medicine Center, which provides family care and is a teaching facility for new doctors. The specific facilities for each campus are described below:

**SEMC Main Campus**
- Ambulatory Surgical Center
- Area Trauma Center
- Fellowship in Gynecologic Endoscopy
- Fellowship in Hospital Medicine
- Marian Medical Professional Building
- Mohawk Valley Heart Institute
- Sleep Disorders Center
- St. Elizabeth College of Nursing
- St. Elizabeth Family Medicine Residency Program

**Medical Arts Campus**
- Advanced Wound Care
- Imaging at St. Elizabeth Medical Arts
- MVHS Medical Group New Hartford Medical Office
- Outpatient Laboratory Draw Site
- Outpatient Rehabilitation Services
Rome Memorial Hospital

A general medical and surgical hospital with 203 beds and a total of approximately 200,000 square feet. According to the most recent data available from U.S. News, the hospital had 27,000 patient visits to the emergency room, 5,170 admissions, 826 inpatient surgeries, and 5,350 outpatient surgeries. In addition to the hospital, there are two senior housing facilities and a nursing home in the downtown area.

Slocum Dickson Medical Center

Slocum Dickson provides a wide variety of outpatient services including primary care, urgent care, eye care, breast care center, radiology, sleep center, rehabilitation, occupational therapy, pain management, and others. Facilities are located in New Hartford and Ilion. A total of 28 different specialties and 13 ancillary services are provided by the medical group.

Faxton – St Lukes Hospital

FSLH includes two campuses with 346 acute care beds and 202 long-term care beds:

- St. Luke’s Campus – 1656 Champlin Avenue, Utica, NY (Main Campus)
- Faxton Campus – 1676 Sunset Avenue, Utica, NY

A not-for-profit healthcare organization, FSLH includes St. Luke’s Home, Senior Network Health, Mohawk Valley Home Care and Visiting Nurse Association of Utica and Oneida County. Survey data for the latest year available shows that 39,500 patients visited the hospital’s emergency room. The hospital had a total of 15,877 admissions. Its physicians performed 2,758 inpatient and 7,372 outpatient surgeries.

The specific facilities include the following:

2 http://mvhealthsystem.org/about/
2206 Genesee Street MOB
This 31,000 square foot Class B medical office building includes a number of tenants including Allergy Care PLLC, Eye Associates of Utica, and the Chahfe Center providing imaging and audiology services. According to CoStar data, the building is fully occupied.

Mohawk Glen Center For Community Health
The Mohawk Glen Center for Community Health is a 40,700 Square foot, Class B medical facility. According to CoStar data, the building is fully occupied.

It provides urgent care and has multiple other tenants including:
- Mohawk Glen Imaging Pc
- Central New York Cardiology
- Dr. Obeid (Ears, Nose & Throat)
- Faxton-St. Lukes Healthcare Cancer & Dialysis Center
- Labcorp
- Hamilton Orthopaedic Surgery and Sports Medicine
- Fitness Forum Physical Therapy
- Family Practice

Oneida Healthcare
Oneida Healthcare is a general medical and surgical hospital in Oneida, NY, with 211 beds. Survey data for the latest year available shows that 25,808 patients visited the hospital’s emergency room. The hospital had a total of 3,318 admissions. Its physicians performed 809 inpatient and 2,849 outpatient surgeries. The hospital services 24 communities in Madison and western Oneida counties with a population of about 80,000. The hospital operates primary health centers in several villages, a maternal health clinic, four outreach laboratory draw stations, a physical therapy center, and imaging centers.

Mohawk Valley Health Systems Downtown Medical Campus – Downtown Utica (Planned)
A major new hospital is planned for downtown Utica with a scheduled opening of 2021. The development cost is currently projected to be $575 million with $300 million set aside from the state for the project. The hospital would replace the inpatient services at Mohawk Valley Health System’s St. Elizabeth and St. Luke’s campuses. The project is expected to catalyze economic development in the downtown area and will directly transform a blighted 28-acre site. The project was generated as part of a proposal by MVHS under the state Delivery System Reform Incentive Payment Program, which aims to fund projects that improve the quality of health care and reduce avoidable hospital admissions.

The new campus is likely to provide space for new and future health care providers, especially larger users and those serving a regional population or serving local Utica needs.
Health Industry Trends

Future demand for medical office space can be projected based on employment growth in the healthcare industry. The following table shows expected employment growth in the Rome Zip Code area over five-years. Nursing care facilities will see the greatest growth with 37 new jobs followed by continuing care retirement communities and assisted living facilities for the elderly. Medical office utilizing industry growth can be found in Offices of Physicians (14 jobs), Offices of Dentists (6 jobs), and Outpatient Care Centers (5 jobs). The projections indicate limited need for new medical office space in the local market.

Source: EMSI

Growth at the regional level should also be considered because there may be potential for Rome to capture a portion of that demand for space. Within the county, sectors related to senior housing are also projected to increase by the greatest number of jobs. Outpatient Care Centers, Offices of Physicians, Offices of Dentists are projected to grow by a combined total of 336 jobs. That translates to a need for about 67,000 square feet of medical office space over the next 5 years in the county (about 13,400 square feet annually).
Marcy Nanocenter Impact

The Marcy Nanocenter is a planned multi-billion-dollar semiconductor chip manufacturing facility that will be developed in Utica. The facility will eventually employ thousands of new workers, many of whom will be new residents to the local area. Additionally, there will be a significant indirect impact as a result of this project generating new jobs and businesses and likely drawing additional new residents to the area. Any increase in population will generate new demand for medical services, increasing the viability of new medical office building development.

In a separate analysis conducted by Camoin Associates as part of the Downtown Rome Step 3 BOA project, the Marcy Nanocenter was projected to generate over 130 new jobs in the Health Care and Social Assistance Industry. Of note, this industry was the single most impacted industry sector as a result of the project. The results suggest that the Nanocenter project will indeed generate new demand for medical office space in the region.

Aging Population Impact

Changes in the population base can have a substantial impact on the demand for health services. An aging population especially has a strong impact on the future demand for services. The graph below shows that the region is getting older with greater numbers of residents in each cohort between 60 years and 84 years. The 70 to 74 years and 75 to 79 years will see the greatest increases in population over the
next ten years. This suggests that demand for health services will be greater than it is today, which means there will likely be a need for additional medical office space in the future.

Utica-Rome MSA Population Projection by Age Cohort

Source: EMSI
Health Facility Needs Analysis

Nationwide there is a system for identifying areas that have a health professional shortage or that are underserved medically. These U.S. Department of Health & Human Services designations are:

- **Health Professional Shortage Area (HPSA):** Areas having shortages of primary care, dental care, or mental health providers and may be geographic (a county or service area), population (e.g., low income or Medicaid eligible) or facilities (e.g., federally qualified health centers, or state or federal prisons).

- **Medically Underserved Areas (MUA):** Areas or populations designated as having too few primary care providers, high infant mortality, high poverty or a high elderly population.

**Health Professional Shortage Area (HPSA)**

The City of Rome is designated as a Health Professional Shortage Area for both mental health and primary care providers (note that there is a sufficient number of dentists). The designation details are provided below for reference:

**Mental Health HPSA**

HPSA Name: Medicaid Eligible - Oneida County  
ID: 736999360I  
Designation Type: HPSA Population  
Status: Designated  
Score: 16 (from 1 to 26; higher is greater priority)  
Designation Date: 08/15/2013  
Last Update Date: 08/15/2013

**Primary Care HPSA**

HPSA Name: Medicaid Eligible - Rome Primary Care Service Area  
ID: 136999363J  
Designation Type: HPSA Population  
Status: Designated  
Score: 10 (from 1 to 26; higher is greater priority)  
Designation Date: 03/31/1998  
Last Update Date: 05/24/2012

**HPSA Criteria:**

For Primary Care HPSA Population designation the following criteria apply:

**Population Groups must:**

- Reside in an area that is rational for the delivery of primary medical care services as defined in the Federal code of regulations.
- Have access barriers that prevent the population group from use of the area's primary medical care providers.
• Have a ratio of persons in the population group to number of primary care physicians practicing in the area and serving the population group ratio of at least 3,000:1
• Members of Federally recognized Native American tribes are automatically designated. Other groups may be designated if they meet the basic criteria described above.

For Mental Health HPSA Population designation the following criteria apply:

**Population Groups must:**

• Face access barriers that prevent the population group from use of the area’s mental health providers
• Meet one of the following criteria:
• Have a ratio of the number of persons in the population group to the number of FTE core mental health professionals serving the population group greater than or equal to 4,500:1 and the ratio of the number of persons in the population group to the number of FTE psychiatrists serving the population group greater than or equal to 15,000:1; or
• Have a ratio of the number of persons in the population group to the number of FTE core mental health professionals serving the population group greater than or equal to 6,000:1; or
• Have a ratio of the number of persons in the population group to the number of FTE psychiatrists serving the population group are greater than or equal to 20,000:1

**Medically Underserved Area (MUA)**

Downtown Rome is a Medically Underserved Area. The area under that designation is shown below.

**MUA/P**

Service Area Name: Oneida Service Area
ID: 07520
Designation Type: Medically Underserved Area
Index of Medical Underservice Score: 58.8
(0 to 100 scale; 0 is highest need; 62 is criteria benchmark)
The MUA designation is based on four variables: the ratio of primary medical care physicians per 1,000 population, infant mortality rate, percentage of the population with incomes below the poverty level, and percentage of the population age 65 or over. The value of each of these variables for the service area is converted to a weighted value, according to established criteria. The four values are summed to obtain the area’s Index of Medical Underservice (IMU) score.

Oneida County Community Health Assessment³

A community health assessment is prepared every 6 years with the most recent assessment being completed for the 2013-2017 period.

The key findings of the health assessment pertaining to medical facilities include the following:

- Provider shortages was the top issue identified by the project’s steering committee. Specifically, mental health providers and behavioral health specialists were identified. The table below shows the top identified health system issues:

<table>
<thead>
<tr>
<th>Health System Issues</th>
</tr>
</thead>
<tbody>
<tr>
<td>Provider Shortages – Mental Health</td>
</tr>
<tr>
<td>Provider Shortages – Cost of Care</td>
</tr>
<tr>
<td>Primary Care – Limited Preventive Services</td>
</tr>
<tr>
<td>Access to Care – Coordination of Care</td>
</tr>
<tr>
<td>Access to Care – Care for the Poor</td>
</tr>
<tr>
<td>Shortage of Providers – Limited Health Information</td>
</tr>
<tr>
<td>Shortage of Specialists – Shortage of Behavioral Health Services</td>
</tr>
<tr>
<td>Access to Care – Cost of Care</td>
</tr>
<tr>
<td>Provider Shortage – Affordability of care</td>
</tr>
<tr>
<td>Access to Care – Health Literacy</td>
</tr>
<tr>
<td>Transportation – Limited Health Education</td>
</tr>
</tbody>
</table>

- Overall, Oneida County has a shortage of health providers, especially in certain specialties including dermatology and mental health, which entail delays of 2 or more months before one can obtain an appointment. There is also a shortage of providers that accept Medicaid or Medicare and others are simply not accepting new patients.
